

Task Description	Classification	One-Line Rationale				
Designing the core deep learning pipeline and loss function for brain tumour MRI classification pipeline	Just Me	Requires human intuition, deep knowledge of what you are doing and how you want to do it				
Reviewing industrial waste management protocols and case studies for the steel industry in India for upcoming presentation for Course Hazardous Waste Management Course	Just Me	Requires Critical Engineering evaluation and accuracy specific to local industry area				
Preparing and refining a tailored self introduction and project portfolio for an Interview at Laxsi Lab for AI/ML intern role	Just me	Study of company and requirements are needed to study, what my pros and cons are?, Authenticity etc				
Trouble shooting shape, dimentions mismatches and gradient issues in the PyTorch tensors during model training loops	Centaur task	Great for interactive, back-and-forth debugging where I feed Claude the error log to isolate tensor flow issues faster.				
Brainstorming feature engineering ideas and data augmentation techniques (like random rotations/crops) for medical imaging datasets.	Centaur task	Excellent for sparking creative ideas and exploring diverse computer vision preprocessing strategies together.				
Designing user interaction flows and mapping out AI integration points for immersive XR (Extended Reality) product concepts.	Centaur task	A dynamic blend of human product vision and AI-assisted UX brainstorming for cutting-edge interfaces.				
Writing standard boilerplate Python code for loading, resizing, and normalizing medical images using OpenCV.	Delegated Task	Highly repetitive infrastructure code that AI handles instantly, though it still requires my verification for correct paths.				
Drafting initial data preprocessing scripts using LangChain and RAG pipelines for unstructured academic document parsing.	Delegated Task	The framework setup is highly standard, allowing AI to draft the baseline script while I review the chunking parameters.				
Generating basic text configurations and initial schemas for BigQuery datasets and relational tables.	Delegated Task	Highly structured and predictable syntax that AI can format quickly, requiring only a quick logic check from me.				
Running automated daily backups of local machine learning project directories and code repositories to GitHub	Automated Task	A simple Git script or cron job handles this on autopilot without requiring any cognitive effort.				
Parsing, cleaning, and formatting raw transaction history data from campus canteen receipts into structured CSV logs.	Automated Task	Easily managed by a fixed Python script or automated macro since the receipt structures remain identical.				
Tracking and verifying recurring monthly subscription receipts (like Spotify Premium Student or Google Play).	Automated Task	Can be handled entirely via automated email filters and spreadsheet triggers without active intervention.				
Checking the daily live running status and booking confirmations for Indian Railways (IRCTC) transit tickets.	Automated Task	Best handled by automated app alerts or dedicated checking scripts rather than manual checking.
